Replace the fifth paragraph (beginning at line 24) of page 5 with the following:

The user interface allows the user to identify images that are more relevant to the query, as well as images that are less or not relevant. The image retrieval system monitors the user feedback and uses it to refine any search efforts and to train itself for future search queries.

Replace the second paragraph (beginning at line 6) of page 19 with the following:

Q2 h3 Fig. 6 shows an example of a query screen 600 presented by the user interface 200 for entry of an initial query. The screen display 600 presents a natural language text entry area 602 that allows user to enter keywords or phrases. After entering one or more keywords, the user actuates a button 604 that initiates the search for relevant images. Afternatively, the user can browse a pre-defined concept hierarchy by selecting one of the categories listed in section 606 of the query screen 600. The user actuates the category link to initiate a search for images within the category.

Replace the first paragraph (beginning at line 1) of page 27 with the following:

 Because the low-level features are not enough to present the images' semantics, some or even all of the automatically labeled keywords will inevitably be inaccurate. However, through user queries and feedbacks, semantically accurate keywords will emerge while semantically inaccurate keywords will slowly be eliminated.
